

## Oils

**Definition:** Oil is a concentrated form of typically THC and/or CBD that is extracted from the marijuana plant through various processes that can use solvents and/or heat. Often referred to as Extracts, Concentrates or Hash Oil.

**Made with:** Marijuana or hemp and sometimes other various ingredients

**Intoxication Information:** THC oil products **do cause** cerebral euphoria; especially because of the high THC potency since concentrated. CBD oil products (with zero THC) **do not cause** cerebral euphoria.

**Activation:** Immediate to 15 minutes

**Forms:** Shatter, wax, honeycomb, sap, keif, bubble hash, live resin, distillate and more

### Topicals

**Definition:** THC and/or CBD infused products that are absorbed through the skin.

**Made with:** Marijuana or hemp and sometimes various essential oils also added

**Intoxication Information:** Most topicals **do not cause** cerebral euphoria that comes with other methods of marijuana use because they are not getting into the bloodstream. Transdermal patches & Intimate lubricants however can access the bloodstream which will cause cerebral euphoria.

**Activation:** Immediate to hours (product depending)

**Forms:** Lotions, salves, pain sticks, oils, soaking salts, lubricants, sprays, patches and more

### Edibles

**Definition:** THC and/or CBD infused foods & beverages that are ingested.

**Made with:** Marijuana or hemp and various ingredients

**Intoxicating Information:** THC infused products **do cause** the cerebral euphoria because they are getting into the bloodstream once digested or sublingual activation takes place. CBD infused products (with zero THC) **do not** cause cerebral euphoria.

**Activation:** 15 minutes to hours (product depending)

**Forms:** Gummies, chocolates, baked goods, beverages, syrups, mints and more

### Terms & Definitions

- **THC:** Tetrahydrocannabinol is the cannabinoid in marijuana that causes the “high” feeling
- **CBD:** Cannabidiol is the cannabinoid in marijuana that does not cause the “high” feeling
- **Cerebral Euphoria:** The feeling of being “stoned” or “high”

### Flower

**Definition:** Flower is the smokable part of the marijuana plant, often referred to as buds or nugs.

**Made With:** Marijuana

**Intoxicating Information:** Majority of flower products **do cause** cerebral euphoria because it contains THC. However, some flower strains can have higher levels of CBD and low levels of THC, this combination could **potentially not cause** euphoria.

**Activation:** Immediate to 15 minutes

**Forms:** Loose Flower, shake, joints, decarboxylated flower and more
